

## POLICY NO EP06 TREE MANAGEMENT POLICY

<b>DEPARTMENT:</b>	Works and Infrastructure
<b>RESPONSIBLE OFFICER:</b>	Manager Works and Infrastructure
<b>LINK TO STRATEGIC PLAN:</b>	Ensure sustainable management of natural and built resources is respectful to our unique location.
<b>STATUTORY AUTHORITY:</b>	Australian Standard for Tree Pruning AS 4373
<b>OBJECTIVE:</b>	This policy is to provide a practical and balanced approach to tree management that seeks to maximise the abundance and health of trees on Council land while ensuring public safety and allowing controlled development. Council acknowledges that trees may come into conflict with other elements of the streetscape, particularly hard structures and services, but recognises that all are essential components of a pleasant and functional landscape
<b>POLICY INFORMATION:</b>	Adopted 19 March 2012 – Minute No 03/12.15.4.069 Amended 25 June 2012 – Minute No 06/12.12.3.153

### POLICY

#### 1. INTRODUCTION

Council is committed to providing a quality living environment for its residents, ratepayers and visitors and recognises the importance of trees to the quality of the Municipal Environment.

#### 2. TREE INVENTORY

Council recognises that the fundamental component of the management of Council's tree assets is the development of a comprehensive Tree Inventory. Priority will be given to the identification of trees in high-risk areas that Council is responsible for and the condition of these trees. Council has identified the high-risk areas as the main streets, playgrounds, recreation grounds, parks and reserves within Town boundaries. In addition, new plantings and tree removals will be documented in the Tree Inventory.

#### 3. TREE PLANTING

Tree planting is an essential component of the management of Council's tree assets. Continued tree planting by Council is required to maintain and increase the number of trees on public land throughout the Municipality.

Management issues associated with street tree planting are prioritisation of planting sites, planting location, species selection and post planting maintenance.

#### 4. SPECIES SELECTION

Species selection shall be based on:-

- Existing streetscape character

- Submissions from local residents
- Environmental conditions
- Growing space and conditions
- Traffic conditions
- Effect on native fauna
- Existing streetscape plans (if available)

## **5. PLANTING BY RESIDENTS**

Planting of street and park trees by residents should only be undertaken with consultation with Council Officers. Unauthorised planting of street trees by residents shall be discouraged, but recently planted trees shall be allowed to remain provided that they are:

- Of a suitable species which is compatible with the surrounding streetscape
- Good quality specimens
- In a suitable location
- Planted to Council standards

Where a tree does not meet these conditions, the resident shall be asked to remove the tree. If this request is not complied with, Council staff will remove the tree.

## **6. RESIDENT OPPOSITION TO TREE PLANTING**

The establishment or maintenance of a consistent planting theme can sometimes require Council to plant a tree in a nature strip against the wishes of the resident immediately adjacent. This is a difficult situation that calls for Council to make a judgement regarding the rights of the wider community over the individual resident.

When making such a decision, it should be borne in mind that a major factor in the survival of a newly planted street tree is the cooperation of the nearest resident in maintaining that tree.

The decision on planting shall be made by the Works Manager or their representative.

## **7. PLANTING IN PARKS**

Where a community group or resident has requested tree planting in a particular park, the park will be assessed and prioritised according to:

- Existing tree cover;
- Level of community interest
- Level of park usage

## **8. TREE REMOVAL**

Removal of trees from nature strips and parks is potentially the greatest source of conflict in the management of Council's trees. Prudent tree management requires Council to assume that every tree, no matter how significant it may appear, is important to someone.

Unfortunately, it sometimes becomes necessary to remove trees, either because of a problem with the tree itself, to facilitate development of adjacent properties or installation of infrastructure. Experience has shown that the concern associated with the removal of trees can be minimised through proper consultation with residents and demonstration of respect for the importance of trees by Council.

Decisions regarding tree removal become necessary in response to applications by residents, developers and external authorities or through observation of problem trees by Council staff.

## **9. TREE PRUNING AND INSPECTION PROGRAM**

An essential component of the management of Council's tree assets is the maintenance of individual trees in a safe and visually appealing condition. Once established, the major maintenance requirement of a tree is pruning.

As a general rule, the pruning of trees should be minimised as all pruning cuts are potentially injurious and trees look more appealing when left to develop into their natural shape. Trees should only be pruned to achieve specific goals.

Scheduled inspections should be carried out on an annual basis and should be inspected for the following:

- Overhanging Limbs
- Exposed tree roots
- Damaged Limbs
- Root rot
- Dead or Diseased trees

## **10. TREE PRUNING GOALS**

Council trees shall be pruned to:

- Maintain public safety through the removal of structurally unsound limbs;
- Maintain tree health through the removal of dead or diseased material;
- Maintain prescribed clearances from services
- Maintain prescribed clearances over roads, footpaths and driveways;
- Ensure traffic safety and visibility of street signs
- Minimise future work requirements through the removal of potential problems at an early stage

## **11. PRUNING PROGRAMS**

Pruning within the Municipality shall be carried out on a programmed basis, with each tree being visited and pruned at least once every three (3) years. In addition, individual trees shall be pruned as necessary in response to complaints from residents or reporting of faults by Council Staff or external authorities.

## **12. PRUNING OF COUNCIL TREES BY RESIDENTS**

Pruning of Council owned trees by anyone other than Council Staff or contractors engaged by Council shall not be permitted.

## **13. PRUNING FOR VIEWS**

Pruning of Council owned trees to provide or maintain views from private properties shall not be permitted.

## **14. PRUNING FOR SOLAR ACCESS**

Pruning of Council owned trees to provide or maintain solar access will not be permitted without due consideration of the ongoing health and ecological importance of the tree. Any costs associated with arborist activities for private solar access will be undertaken by Council but at the cost of the person making the request.

Council will consider each request for tree pruning/removal in line with a report and recommendation from a qualified arborist. Council will consider this request at the first ordinary Council Meeting following the receipt of the report from the arborist.

#### **15. DAMAGE CAUSED BY TREES**

The response by Council to damage caused by trees will vary according to the type and extent of the damage. The most commonly reported types of damage and Council's response to each are detailed in the work procedures for insurance claims management.

<b>SIGNIFICANT TREE REGISTER</b>			
<b>TREES</b>	<b>LOCATION</b>	<b>SPECIES</b>	<b>REASON</b>
Tea Tree & Blue Gums	Binalong Bay Gulch (Crown Land)	Melaleuca ericifolia Eucalyptus globulus	<ul style="list-style-type: none"> <li>• Blue swift parrot breeding area</li> <li>• Tea trees act as filter for storm water</li> <li>• Final stand of gums on foreshore</li> </ul>
