### 1.1 Purpose

The purpose of a long-term financial plan (LTFP) is to guide the future direction of Council in a sustainable manner.

It is linked with Council's objectives, goals and desired outcomes in financial terms.

It is a guideline for future action and encourages Council to think about the future impact decisions made today have on Council's long-term sustainability.

### 1.2 Principles

Section 70(1), (2) and (3) of the Tasmanian Local Government Act 1993 requires Councils to prepare a longterm financial plan for the municipal area for at least a ten (10) year period.

The long-term financial plan is to:
a) be consistent with the strategic plan for the municipal area;
b) refer to the long-term strategic asset management plan for the municipal area and
c) contain at least the matters that are specified in an order made under section 70F as required to be included in a long-term financial plan.

The Local Government (Content of Plans and Strategies) Order 2014, Section 5 (2) requires the long-term financial plan to include the following matters, for each year of the plan:
a) the estimated revenues and expenses including the revenues and expenses in relation to each of the following matters:
i. all capital works
ii. all capital expenditure
iii. all asset management requirements identified, as required under clause 7(2)(b), in the long-term strategic asset management plan
b) a statement of comprehensive income, including estimates of -
i. recurrent revenue
ii. recurrent expense
iv. underlying surplus or deficit
iv. net surplus or net deficit
v. comprehensive result
c) a statement of financial position, including estimates of -
i. current and non-current assets
ii. current and non-current liabilities
iii. net assets
iv. equity, including reserves
d) a cash flow statement, including estimates of -
i. receipts, payments, dividends and net cash from operational activities, financial activities including loan borrowings, and investment activities
ii. net increases or net decreases in cash held
iii. cash and cash equivalents held at the beginning of the period
v. cash and cash equivalents held at the end of the period

Also required are:
a) A description of the financial management strategies to be adopted by the Council, including financial targets and their rationale;
b) A comparison of projected financial performance against targets (determined by the Council) for financial indicators, including those indicators specified in an order made under section $84(2 A)$ of the Act, for each financial year included in the long-term financial plan;
c) All assumptions used in the development of the estimates referred to in the LTFP.

Estimates are to include separate estimates in respect of renewal, upgrade and new capital expenditure.

The first projected year of the LTFP is consistent with the Annual Budget adopted for the current financial year.

## 2 IMPACTS UPON THE CURRENT PLANNING ENVIRONMENT

### 2.1 The Planning Period

Whilst the LTFP is for a ten (10) year period it incorporates the Infrastructure and Asset Management Plan (IAMP). Due to the long lived nature of many Council assets the IAMP may consider different periods.

### 2.2 Depreciation

Depreciation is the difference between the value of the Council's assets at the beginning of a stipulated period and the end. If no maintenance is performed on assets they have a finite life. That is they will depreciate over time and their value will decrease. With ongoing maintenance the life of these assets is extended. For some assets, if components are renewed on a regular basis, the life can be further extended.

It is recommended that an amount be spent on renewing or replacing asset components equivalent to depreciation expense. This would ensure their value is maintained.

Therefore, in line with the mandated LTFP requirements, operating expenditure includes any depreciation expense. Capital expenditure on asset renewal or replacement is then shown net of depreciation. That is if an amount equivalent to depreciation is spent then net capital expenditure is nil. If spending is less than the depreciation expense then the net expenditure will show as income for the purposes of the model.

## For example;

The operating cost of maintaining roads per annum is $\$ 0.8 \mathrm{~m}$ which includes $\$ 0.4 \mathrm{~m}$ of depreciation expense. If the amount spent on road renewal and replacement equates to the depreciation expense then the rates required to maintain roads would be $\$ 0.8 \mathrm{~m}$. If only $\$ 0.2 \mathrm{~m}$ was spent on road renewal then this would mean the road value would reduce by $\$ 0.2 \mathrm{~m}$ during the year. This is because insufficient rates have been used to renew roads at the rate that they are being consumed.

### 2.3 Accounting Standards

Annually the Council has to produce a general purpose financial report that has been prepared in accordance with Australian Accounting Standards, Australian Accounting Interpretations and other authoritative pronouncements of the Australian Accounting Standards Board. This report is externally audited.

### 2.4 Presentation of Council Budgets

Both the Annual Budget and LTFP's are required to be summarised in a similar format as that in the annual financial report. The Income Statement describes revenues and expenses by type such as Statutory Charges and Employee costs. Council considers its budget by function or program. The LTFP is driven from Council's existing functional or program budget. It is then summarised and linked to the annual financial report format.

## 3 FINANCIAL STRATEGY

### 3.1 Councils Vision/Mission

## Vision Statement

A naturally beautiful environment that speaks to our heart.
A diverse and thriving community; a place of opportunity.
A place where everyone feels safe, welcome and connected.

## Values Statement

Working as a TEAM with OPEN \& HONEST COMMUNICATION; we act with INTEGRITY whilst showing RESPECT and being POSITIVE and proactive in our actions

### 3.2 Strategic Plans

Council has adopted a Strategic Plan for the period 2017-2027. The Long Term Financial Plan and the Infrastructure and Asset Management Plans form part of the delivery of the intent of the Strategic Plan.

### 3.3 Roles and Responsibilities

The Local Government Act 1993 specifies the services that Councils are to provide. Sometimes Councils provide additional services on behalf of State or Federal Governments. Grants, subsidies or reimbursements are provided to fund these services. When funding is insufficient or ceases Council has to determine whether it will fund the shortfall or continue to provide the service.

### 3.4 Revenue and Financing Strategy

Council needs to continue to identify services and facilities that are provided to specific groups rather than the general community. Rate funding of these services needs to be considered where user charges or where applicable grant funding could be increased.

### 3.5 Rating Strategy

Historically sufficient rates were raised to "balance" the budget. The tendency now is to adopt a rating policy that limits the annual increase in rates revenue with an allowance for new property development. Debt and reserves then become the "balancing item". Surplus funds could be set aside in reserves for future capital expenditure. Deficits in the future could be funded from these reserves. Debt could also be used with loan repayments being funded from future budgets. Council rating policy also considers who
bears the rates burden. Whilst property valuations are the main factor, minimum rates, service charges and selective capping can shift some of the burden between ratepayer classes based on the perceived ability to pay.

Council generally is increasing rates above the rate of inflation until the operating deficit is eliminated and the significant infrastructure maintenance backlog is addressed. Council has a separate Rating Policy (LG40 Rates \& Charges Policy) that should be referred to.

### 3.6 Treasury Strategy

Holding cash whilst also borrowing may result in an interest differential cost to Council. It depends on what interest rate Council is currently paying on its existing loans compared to what interest could be earned on investing surplus funds. If Council was currently earning $6.5 \%$ on its invested cash there would be no financial benefit in paying off any existing loans where the interest rate is less than $6.5 \%$ having regard to minimum cash we wish to hold into the future.

Generational equity for assets with long lives will also be a factor in borrowing strategies.
Council will use borrowings to fund the backlog of infrastructure maintenance needs until assets and operating deficits achieve sustainability. Subsequently, borrowings may be used similarly to address identified infrastructure backlogs or for acquisition of new assets.

### 3.7 Performance Indicators

Council's strategic plans, including the Long Term Financial Plan, should state the measures (financial and non-financial) that are to be used to monitor and assess the performance of the Council against its objectives.

There are difference types of indicators some of which are identified below. In general, Council will report using legislated Management (Asset and Finance) Ratios, consistently for all financial and budget reporting, supplemented by other indicators as appropriate.

### 3.8 Service Levels

These are measures of the levels of service being provided. As indicated above some of these levels are externally determined. Others depend on Council policy. For instance if Council wishes to construct new assets, this is an increase in service level.

### 3.9 Population

Expressing Council net expenditure for a particular function or program, as a factor of population is a good relative indicator of where Council's resources are being spent. An alternative would be to use the number of rateable properties. However, unless the average number of persons resident in households changes significantly, the comparison would be similar.

### 3.10

 Operating Efficiency - InfrastructureThis is the money being spent per km on infrastructure assets. If more money is spent per km this may ensure more efficient maintenance of infrastructure assets in the longer term. Council's Infrastructure and Asset Management Strategy should indicate optimal expenditure levels to ensure long term asset sustainability.

### 3.11 Explanation of Management Indicators

For the purposes of Section $84(2 \mathrm{~A})$ of the Local Government Act, Local Government (Management indicators) Order (S.R.2014, No. 36) has specified the following indicators; the Tasmanian Audit Office has identified benchmarks for each:

- Asset consumption ratio: greater than $60 \%$ (in total and possibly by asset class)
- Asset renewal funding ratio: at least $90 \%$
- Asset sustainability ratio: at least $100 \%$
- Net financial liabilities ratio: between negative $50 \%$ and zero
- Underlying surplus or deficit and ratio: greater than zero

## Financial

## Net Financial Liabilities

What is owed to others less money held, invested or owed to Council

Calculated as:
Total Liabilities or Net financial liabilities (from Balance Sheet/Statement of Financial Position)
Less: Financial Assets (Current cash and cash equivalents, Current trade \& other receivables, Current other financial assets, Non-current financial assets)

## Net Financial Liabilities Ratio

Calculated as:
Net financial liabilities (as above)
Divided by:
Financial Assets (as above)

## Underlying Surplus/(Deficit)

The difference between recurrent income (not including income received specifically for new or upgraded assets, physical resources received free of charge or other income of a capital nature) for a financial year less the recurrent expenses for the financial year.

## Underlying Surplus Ratio

The underlying surplus or deficit for a financial year divided by the recurrent income (not including income received specifically for new or upgraded assets, physical resources received free of charge or other income of a capital nature) of a council for the financial year

## Assets

## Asset Consumption Ratio

Written down value of depreciable infrastructure, property, plant and/or equipment Divided by:
Reported value of depreciable infrastructure, property, plant and/or equipment before accumulated depreciation

## Asset Renewal Funding Ratio

Means an amount that is the current value of projected capital funding outlays for an asset divided by the value of projected capital expenditure funding for the asset

## Asset Sustainability Ratio

Means an amount that is capital expenditure in a financial year on the replacement and renewal of existing council plant, equipment and infrastructure assets divided by the annual depreciation expense of the plant, equipment and assets for the financial year

Calculated as:
Expenditure on renewal/replacement of assets (Cash Flow Statement)
Less: Sale of replaced assets (Cash Flow Statement)
Divided by:
Depreciation, amortisation \& impairment expense (Income Statement)

### 3.12 Explanation of Terms

Below is a brief explanation of some of the terms used in the Long Term Financial Plan.

Operating Expenses - this is what it costs to operate the Council services including financing costs and depreciation. Financing costs represent the interest on loans taken out to fund capital expenditure. Assets purchased to aid with the provision of a service only have a limited life before they need to be replaced. Depreciation expense represents the cost of using the asset over its life.

Support Services Allocation - external financial reports produced by Council must include an appropriate allocation of administrative overhead for each service.

Operating Income - this represents any revenue generated by the provision of the service including any service rates and charges raised.

Operating Surplus/(Deficit) before capital amounts- income less expenditure before capital amounts.

Capital Expenditure on Renewal Replacement of Existing Assets - Council expenditure on assets has two parts. The first is maintenance. This is included in operating expenditure. The second is capital. That is expenditure on the renewal of Council assets. This is not shown under operating expenditure. It is included in the Balance Sheet of the Council as an asset. Generally the asset is subsequently depreciated. As indicated above this depreciation expense is included in the operating expenses.

Less Depreciation, Amortisation \& Impairment - depreciation is an expense that recognises the consumption of Council assets. It is considered that councils should spend an amount, equivalent to the depreciation expense, each year on renewing assets. This would ensure that the values of Council's assets are maintained.

Capital Expenditure on New/Upgraded Assets - the amount spent on new or upgraded assets, that is, long lived plant, equipment or infrastructure that provides a new or enhanced level of service. Clearly, a new building is Expenditure on a New Asset. Replacing an existing stormwater pipe with a "bigger" pipe will be Capital Expenditure on Upgraded Assets for the increased service level provided by the larger pipe.

Amounts Received Specifically For New or Upgraded Assets - Generally this would be grants received from State or Commonwealth governments to help fund new assets. It would also include any contributions made by the private sector or community organisations towards capital works.

Cash and Cash Equivalents - Cash Assets include all amounts readily convertible to cash on hand at Council's option with an insignificant risk of changes in value with a maturity of three months or less from the date of acquisition.

Loans Received - loans drawn down and received during the year.

Loan Repayments - loan principal repaid during the year.

Net Lending/(Borrowing) for the financial year - Net lending / (borrowing) is a 'flow' measure that takes account of both operating and capital activities for the financial year. Achieving a zero result on the net lending / (borrowing) measure in any one year essentially means that the Council has met all of its expenditure (both operating and capital) from the current year's income (with income including amounts received specifically for new / upgraded assets). It does not allow for funds set aside by way of reserves.

Net Impact on Budget - this is the surplus that can be used to fund other services or the final deficit after capital expenditure. It allows for any reserves that Council may wish to set aside for future capital expenditure.

Reserves - Council may elect to nominate funds that will be required for specified future capital expenditure. Until these funds are required they may be used to fund other capital expenditure that would otherwise require a loan.

### 3.13 Assumptions

- Inflation has not been factored into any future amounts.
- Rates increase of 2\% above inflation for years 2018/2023.
- Wage increase of $1 \%$ above inflation for next 10 years.
- Interest Received estimated as $2.5 \%$ pa on previous years cash balance.
- Roads to Recovery (R2R) identified as additional income for renewal of road and bridge assets
- Calculations based on approximately 6,350 rateable properties.
- See the Financial Indicators and Data sheet for target level \% used in the graphs.
- Interest free borrowings of $\$ 1.5 \mathrm{M}$ drawn $2017 / 2018$ to accelerate capital projects from future years to be repaid $\$ 500,000$ 2019/2020 and $\$ 1 \mathrm{M}$ 2021/2022.

## 10 NET FINANCIAL LIABILITIES RATIO

How significant is the net amount owed compared with income.
This ratio indicates the extent to which net financial liabilities of a Council could be met by its operating revenue. Where the ratio is falling over time indicates that the Council's capacity to meet its financial obligations from operating revenue is strengthening. However a Council with a healthy operating surplus may decide to allow its net liabilities ration to increase in order to provide additional services to its community through the acquisition of additional assets without detracting from its financial sustainability.

## 13 ASSET CONSUMPTION RATIO

The average proportion of "as new condition" left in assets.

This ratio shows the written down current value of Council's depreciable assets relative to their "as new" value in up to date prices.

This ratio highlights the aged condition of Council's assets. If a Council is responsibly maintaining and renewing and replacing its assets then the ratio would be relatively high. However, it makes no sense financially to replace perfectly serviceable assets just because they are old. Providing a Council is operating sustainably it will be in a strong financial position to be able to fund the future renewal or replacement of assets when necessary.

Council's Target - between $40 \%$ and $80 \%$. That is Council's assets have between $80 \%$ and $40 \%$ of their useful life left.

## 14 ASSET RENEWAL FUNDING RATIO

Means an amount that is the current value of projected capital funding outlays for an asset divided by the value of projected capital expenditure funding for the asset.

Break O'Day Council - Asset Renewal Funding Ratio for FYE 2017 to FYE 2027

## 15 ASSET SUSTAINABILITY RATIO

Are assets being replaced at the rate they are wearing out.

This ratio indicates whether Council is renewing or replacing existing non-financial assets at the same rate the assets are wearing out. It is calculated by measuring capital expenditure on renewal or replacement of assets relative to the recorded rate of depreciation of assets for the same period.

If capital expenditure on renewing or replacing existing assets is at least equal to depreciation on average over time then a Council is ensuring the value of its assets is maintained. If capital expenditure on existing assets is less than depreciation it is likely it is under spending on renewal and replacement of assets and will eventually be confronted with failed assets and a significant renewal and replacement costs that cannot be accommodated for within a short period.

Council's Target - is 100\%. That is Council spending an amount each year equivalent to the depreciation expenses on asset renewal.
